

Firewood

Seasoned split hardwood for heating, hospitality and retail applications

Commercial format	Solid wood fuel
Product family	Firewood
Document use	Commercial product reference

Technical specification

Parameter	Specification
Product type	Split seasoned hardwood firewood
Species	Oak, beech, ash or mixed hardwood; exact species or blend stated on the quotation
Moisture content	<= 20% at packing, measured using the agreed method
Nominal cut length	25, 30, 33 or 40 cm; tolerance stated for the ordered product
Typical split size	Approximately 5-15 cm across the split face, subject to natural variation
Form	Split logs; round pieces only where specifically agreed
Bark	Natural bark content and variation according to species and batch
Visible condition	Clean product without unacceptable visible rot, excessive mould or foreign material at packing
Indicative net calorific value	Approximately 3.8-4.2 kWh/kg at <=20% moisture, depending on species and measured moisture
Packaging	Net bags, stacked crates or buyer-agreed commercial format
Quantity declaration	Mass, stacked volume or loose volume basis stated on quotation and packing documentation
Storage	Ventilated, covered and protected from rain and ground moisture
Traceability	Species and source-lot information supplied where available and contractually required

Commercial note. These parameters define the standard product profile. Order-specific requirements and final supplied values are confirmed by quotation and applicable batch documentation. Certification status is stated only where supported by current documentation.
